**DETAILED ACTION**

1. The amendment filed on 10/29/08 has been entered.

***Response to Arguments***

2. Applicant's arguments, see Remarks (pages 7-8), filed 10/29/08, with respect to the limitation recited in claim 3 have been fully considered and are persuasive.

The Examiner agrees with the Applicant that claim 1, which is now includes all of the limitations of claims 2 and 3, is to directly connect bus bars located on the top of a power circuit to the top side of the control circuit board when the control circuit board is positioned on top of the power circuit, while Suzuki discloses connecting two elements on the same side of a single board, not elements of two different boards stacked on top of one another.

Therefore, the rejection of claim 1 has been withdrawn, since claims 2-3 are cancelled and the limitations of claims 2-3 are added into claim 1.

***Allowable Subject Matter***

3. Claims 1 and 4-9 are allowed.

***Reasons for allowance***

4. The following is an examiner's statement of reasons for allowance:

(a) **Regarding claims 1 and 4-6**, the best prior art references, Onizuka et al. (US 20030137813), Chapmen et al. (US 20030003800), and Suzuki et al. (US 6372998), taken alone or in combination, fails to teach or fairly suggest, at least on claim 1, in combining with other limitations, an electrically-connecting member is formed of a metal plate and disposed in a posture approximately parallel to a control circuit board, and

wherein the electrically-connecting member has a surface soldered onto a conductor segment and a surface soldered onto the exposed portion of a specific bus bar, and is formed with a step portion providing a height difference approximately equal to a board thickness of the control circuit board, between the surfaces, the height difference allowing a solder fillet connecting the electrically-connecting member to the bus bar to be formed on a surface of the exposed portion of the specific bus bar. None of the reference art of record discloses or renders obvious such a combination.

**Regarding claim 7**, the best prior art references, Onizuka, Chapmen, and Suzuki, taken alone or in combination, fails to teach or fairly suggest, in combining with other limitations, an electrically-connecting member is formed with a cutout in at least one of the portion soldered onto a conductor segment and the portion soldered onto the exposed portion of a specific bus bar.

**(b) Regarding claims 8-9**, the best prior art references, Onizuka, Chapman, and Suzuki, taken alone or in combination, fails to teach or fairly suggest, at least on claim 8, in combining with other limitations, a plurality of through-holes adjacent to a conductor segment, and an electrically-connecting member formed in a shape bridging over the through-holes and the conductor segment is soldered onto the conductor segment and a specific one or more of the bus bars exposed through the through-holes. None of the reference art of record discloses or renders obvious such a combination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
